**CAUTION**  
**KEEP OUT OF REACH OF CHILDREN**  
**READ SAFETY DIRECTIONS BEFORE OPENING OR USING**

**Raxil® T**

**FLOWABLE SEED DRESSING**

**ACTIVE CONSTITUENTS: 25 g/L TEBUCONAZOLE**  
**4 g/L TRIFLUMURON**

<b>GROUP</b>	<b>3</b>	<b>FUNGICIDE</b>
<b>GROUP</b>	<b>15</b>	<b>INSECTICIDE</b>

**For control of bunt, flag smut and loose smut of wheat and covered and loose smut of barley and oats.**  
**Treated seed is also protected against insect pests of stored grain.**

**DIRECTIONS FOR USE**

**RESTRAINT**

**DO NOT** treat physically damaged seed.

<b>CROP</b>	<b>DISEASE/PEST</b>	<b>RATE</b>	<b>CRITICAL COMMENTS</b>
Wheat	Bunt, flag smut (seed and soil borne), loose smut	100 mL/100 kg seed	Raxil T Flowable Seed Dressing should be mixed with water to give even coverage of seed. The quantity of water will vary depending on type of equipment and quality of seed. Use a minimum of 400 mL of mixture (i.e. Raxil plus water) with each 100 kg of seed. Do not use more than 600 mL of mixture (product + water) with each 100 kg of seed. Whatever dilution is used it is essential that 100 mL of Raxil is applied per 100 kg seed. The mixture should be gently stirred regularly. If nasal irritation occurs wear a facemask while treating seed.
Barley	Covered and loose smut		
Oats	Covered and loose smut		
Wheat, Barley, Oats	Protection against pests of stored grains: granary weevil, lesser grain borer, rice weevil, rust-red flour beetle, saw-toothed grain beetle		

**NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**WITHHOLDING PERIODS**

**Food producing crops: NOT REQUIRED WHEN USED AS DIRECTED**

**Stock: DO NOT GRAZE PLANTS GROWN FROM TREATED SEED, OR CUT FOR STOCK FOOD WITHIN 4 WEEKS OF SOWING**

**GENERAL INSTRUCTIONS**

Raxil may delay emergence of wheat. Crops will recover rapidly in most soils without any adverse effect on yield. Sowing Raxil treated wheat deeper than 50 mm may reduce plant establishment in heavier soils or soils that will crust or clod at the surface after sowing. Sowing rates may need to be adjusted accordingly.

**Seed quality**

Raxil seed treatment should not be used on seed with more than 12% moisture content, or on sprung, sprouted, damaged or severely pinched seed, or seed of poor viability. If in doubt, have a germination test carried out on the seed before treatment to ensure that it is of acceptable standard.

Treating with Raxil as directed will raise the moisture level of the seed by up to 0.6%, depending on weather conditions at treatment. The use of Raxil mixed with water at recommended rates will have no effect on the storage life of treated sound seed.

**Storage of treated seed**

Treated seed may be held over for sowing in the following season. If so, additional insecticide treatment will be necessary. Treated seed prevents insects from multiplying and preserves grain condition but may not kill adult insects migrating from other infested grain. If the seed is not used immediately after treatment it should be stored in a dry, well ventilated place. Although Raxil has no effect on the viability of treated seed, subsequent germination can be adversely affected by poor storage conditions such as high moisture combined with high temperatures. No liability can therefore be accepted for the performance of stored treated seed.

**Cleaning up**

Equipment should be thoroughly cleaned with water. In the event of changing from this water based flowable formulation to a solvent based liquid formulation, it is essential to rinse equipment with methylated spirits after thoroughly cleaning with water. If changing from a solvent based liquid to this water based flowable thoroughly clean with methylated spirits then rinse with water. Failure to do so will result in clogging of equipment.

**FUNGICIDE RESISTANCE WARNING**

<b>GROUP</b>	<b>3</b>	<b>FUNGICIDE</b>
--------------	----------	------------------

Raxil T is a member of the DMI group of fungicides. For fungicide resistance management Raxil T is a Group 3 fungicide. Some naturally occurring individual fungi resistant to Raxil T and other Group 3 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by this product and other Group 3 fungicides, thus resulting in a reduction in efficacy and possible yield loss. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that result from failure of Raxil T to control resistant fungi.

**INSECTICIDE RESISTANCE WARNING**

<b>GROUP</b>	<b>15</b>	<b>INSECTICIDE</b>
--------------	-----------	--------------------

For insecticide resistance management, Raxil T is a Group 15 insecticide. Some naturally occurring insect biotypes resistant to Raxil T and other Group 15 insecticides may exist through normal genetic variability in any insect population. The resistant individuals can eventually dominate the insect population if Raxil T and other Group 15 insecticides are used repeatedly. The effectiveness of Raxil T on resistant individuals could be significantly reduced. Since occurrence of resistant individuals is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that may result from the failure of Raxil T to control resistant insects. Raxil T may be subject to specific resistance management strategies. For further information contact your local supplier, Bayer Crop Science representative or local agricultural department agronomist.

**PRECAUTIONS**

Do not allow seed treated with this product to contaminate seed intended for human consumption. If possible, use a separate auger for treating seed. If using the same auger for treating seed and moving grain for human consumption, remove all Raxil residue from the auger to avoid contaminating untreated seed with seed dressing residues.

**PROTECTION OF LIVESTOCK**

Seed treated with this product must not be used for animal consumption or poultry feed or mixed with animal feed. Do NOT allow seed treated with this product to contaminate seed intended for animal consumption.

**PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT**

Do NOT feed treated seed or otherwise expose to wild or domestic birds.

Harmful to fish and aquatic arthropods. Do NOT contaminate dams, rivers, ponds, watercourses or drains with this product, used containers or bags which have held treated seed.

**STORAGE AND DISPOSAL****Product and original container**

Store product in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.

**10 L**

Triple rinse container before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush, or puncture and deliver empty packaging to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500 mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable

vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. Do not burn empty containers or product. Do not re-use empty container for any other purpose.

### 100 L

If tamper evident seals are broken prior to initial use then the integrity of the contents cannot be assured. Empty container by pumping through dry-break connection system. Do not attempt to breach the valve system or the filling point, or contaminate the container with water or other products. Ensure that the coupler, pump, meter and hoses are disconnected, triple rinsed and drained after each use. When empty, or contents no longer required, return the container to the point of purchase. This container remains the property of Bayer CropScience Pty Ltd.

### 1000 L

If tamper evident seals are broken prior to initial use then the integrity of the contents cannot be assured. The container must be vented before discharging contents. To empty connect a camlock fitted hose to the bottom valve. Remove top cap when discharging for venting purposes. When the container is empty, close all caps and valves and return the container to the point of purchase.

### Treated seed and containers of treated seed

When treated seed is stored it should be kept apart from other grain and the bags or other containers should be clearly marked to indicate the contents have been treated with this product. Do NOT use treated seed for human consumption. Bags which have held treated seed are not to be used for any other purpose.

### Application equipment

Rinse all application equipment with clean water immediately after use and dispose of rinsings in a dedicated disposal pit, specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots.

### SAFETY DIRECTIONS

Wash hands after use.

### FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26.

### SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet, which can be obtained from [www.crop.bayer.com.au](http://www.crop.bayer.com.au).

### EXCLUSION OF LIABILITY

This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

Raxil® is a Registered Trademark of the Bayer Group.
