SECTION 11. TOXICOLOGICAL INFORMATION

11.1 Information on toxicological effects

Acute oral toxicity LD50 (Rat) > 2,000 mg/kg Acute inhalation toxicity LC50 (Rat) > 3.013 mg/l Exposure time: 4 h Irritating to respiratory system. Determined in the form of a respirable aerosol. Highest attainable concentration. Acute dermal toxicity LD50 (Rat) > 4,000 mg/kg Skin corrosion/irritation No skin irritation (Rabbit) Serious eye damage/eye Slight irritant effect - does not require labelling. (Rabbit) irritation Skin: Sensitising (Guinea pig) Respiratory or skin sensitisation OECD Test Guideline 406, Buehler test

Assessment mutagenicity

Spirotetramat was not mutagenic or genotoxic based on the overall weight of evidence in a battery of in vitro and in vivo tests.

Assessment carcinogenicity

Spirotetramat was not carcinogenic in lifetime feeding studies in rats and mice.

Assessment toxicity to reproduction

Spirotetramat caused male reproductive toxicity in the presence of general toxicity in the rat at very high experimental dose levels. There were no effects on male fertility in mice and dogs. The reproductive toxicity seen with Spirotetramat is due to an overwhelmed elimination capacity at high doses. The high dose levels needed for this effect cannot be achieved even in a worst case exposure scenario.

Assessment developmental toxicity

Spirotetramat caused developmental toxicity only at dose levels toxic to the dams. Spirotetramat caused a delayed foetal growth, an increased incidence of variations.
