Gaucho[®] insecticidal seed treatment The optimum choice for sorghum

From the moment of sowing, Gaucho insecticidal seed treatment protects your interests by setting up your crop for the best possible yield. Gaucho protects each and every seed from insect attack through the vulnerable early growth phases, reducing the need to spray and allowing beneficial species to flourish unharmed. Since good plant establishment makes a significant difference at harvest, Gaucho also protects your profits. Protect your interests, order your Gaucho when you order your Sorghum seed.

Gaucho (imidacloprid) – unique active, unique benefits

- Controls sugarcane wireworm (*Agrypnus variabilis*)
- Controls eastern false wireworm (*Pterohelaeus darlingensis*)
