

# INTERRUPT MITES

With long-lasting residual control in pome & stone fruit.

interrupt®

Interrupt® 240 SC Miticide delivers strong protection against two-spotted mites with:

- Unique mode of action miticide
- Long-lasting residual control up to 21 days
- Translaminar movement for full leaf coverage
- Activity on all mite life stages\*

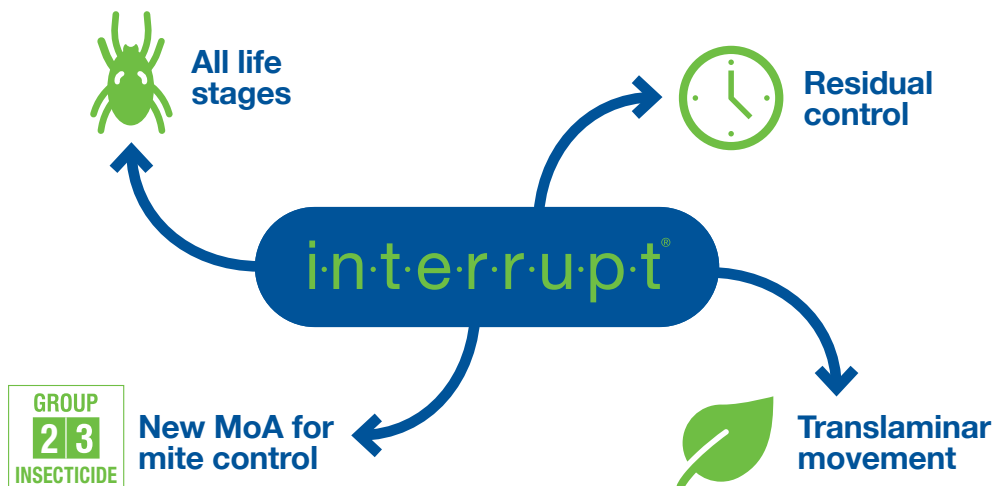

\*Reduced fecundity of adult females.

Interrupt offers Australian pome and stone fruit growers a new mode of action for controlling two-spotted mites, providing them with a new option for resistance management. It has shown excellent performance for controlling two-spotted mites, with long-lasting residual control for up to 21 days and activity on mites across all life stages.

## Key Features

- /// New MoA for miticides, giving growers a new resistance management option.
- /// Residual control of mites for up to 21 days after application.
- /// Translaminar movement of the miticide across the full leaf.
- /// Activity on all life stages\*.
- /// Interrupt miticide moves through the leaf epidermis and mesophyll to control mites not directly exposed to sprayed surfaces.

\*Reduced fecundity of adult females.

# Activity on all life stages

- /// Interrupt has activity on mites at all life stages.
- /// Activity on eggs and nymphs is mostly through contact activity with some translaminar effect.
- /// Activity on adults is through an effect on the fecundity of adult females.
