

SIVANTO[®]
prime

**FUTURE NEW
BUG CONTROL
OPTION**

*FOR MACADAMIA
GROWERS*

- ▶ **Excellent crop protection**
- ▶ **Quick feeding cessation**
- ▶ **Honeybee and native stingless bee safe***
- ▶ **IPM compatible***

SIVANTO® prime is a new insecticide from Bayer for the control of a range of sucking insect pests with an outstanding safety profile. SIVANTO prime offers excellent crop protection with fast cessation of feeding and excellent control of important stages in the insect lifecycle.

SIVANTO prime is compatible with honeybees and native stingless bees allowing application during flowering when used as directed. Demonstrated selectivity to many beneficial species in macadamia nut crops provides a perfect fit for Integrated Pest Management (IPM) programs.* In addition, the mode of action of the systemic active ingredient flupyradifurone in SIVANTO prime means it is highly suitable for use in resistance management programs.

SIVANTO prime is registered for use in macadamias. Launch of SIVANTO prime for use in macadamia will follow in 2022, once suitable export tolerances have been established such that there will not be any trade impact for the Australian crop.

*SIVANTO prime may cause short-term effects to bees - refer to label statement. Where predatory bugs are not employed.

▶ PEST TARGETS

**BANANA SPOTTING
BUG &
FRUITSPOTTING BUG**
(*Amblypelta lutescens*
& *Amblypelta nitida*)
