Xivana[®] Prime – outstanding downy mildew control

Reliable grape protection

Highly efficient, preventative control with strong anti-sporulant efficacy. Xivana Prime acts on all stages of the pathogen's life cycle.

New mode of action

A new mode of action for downy mildew control in grapes, with protective and some curative activity. Xivana Prime features a highly active molecule, with a very low dose rate and has proved, worldwide, to have high efficacy compared to current market standards.

Long-lasting

Effective period of control is equal to, or better than, current market standards, even under heavy rain or increasing disease pressure, allowing more flexible spray programs.*

Safety profile

Excellent safety profile for pollinators and beneficial insects. Low dose rate with no measurable transfer to wine.**

**For more information visit crop.bayer.com.au
or talk to your local Bayer Crop Science representative.**

*When used as directed. Apply up to pre-bunch closure (E-L 31 or 7 mm berries). **Residues in wine below LOQ when used as directed.
